Опис

Summary -
Interested in learning about programming and other technologies. Studying Applied Mathematics instilled a desire to find a solution, even to the most common mistakes. Mathematical statistics and computational methods are what interests me at the moment most, as a hobby. In my work I want to work with desktop applications, with WPF technology in C #, using both .Net Core, .Net Framework and .Net 5.0. There is also a desire to start developing web applications (since they are sometimes better suited for solving pressing problems than heavier and inflexible desktop applications).

Experience

My github - https://github.com/RdEErAqUa.

1. .Net 5.0, .Net Core, .Net Framework ,Pattern MVVM, WPF, WinForms:
a. on github I have several applications that I wrote using the technologies mentioned.
One of the most interesting for me was data analysis (one-dimensional Quau, and twodimensional Quau2.0). Here it was necessary to carry out a primary mathematical
analysis using various technologies. In fact, while working on this project, I studied a lot
of programming principles (and faced a huge number of problems, which I eventually
solved).
b. There is also a program for working with approximations (8 methods) and numerical
differentiation and integration (3-4 methods each).
c. Each of these programs in their implementation was a single application where the
choice of the user depended on what the program would do.
d. Developed applications on winforms (not available on github), such as a system for
detecting errors in some kind of calculus, and calculating matrices by various methods.
2. Python - I have experience with python at a basic level. Developed the game "bulls and cows".
3. Git – work with git in every project(commonly in visual studio), but also experience in usual git.
