Опис

Candidate’s Overview

7 years of commercial software engineering covering all stages of the release cycle with a solid background in both web development and Unity3D and current focus on web development (ASP.NET MVC). Started the career in a software outsourcing company as a Junior Developer and progressed up to a Senior Developer role.

- Strong software design and problem-solving skills
- Knowledge and enthusiasm for Agile development practices
- Great ability in prototyping, visioning, technical discussions and knowledge sharing
- Attention to details and passion for high quality software

Usual Responsibilities

- Designing and implementing code architecture;
- Refactoring of, and working with existing code base;
- Driving User Story delivery from requirements elicitation to production;
- Helping Product Owner to identify technical requirements;
- Estimating and requirements testing;
- Meeting deadlines and producing high quality code;
- Actively solving problems with performance and stability issues;
- Working closely with the rest of the development team to determine interdependencies;
- Collaborating closely with the whole project team (artists, business analysist and junior developers) in order to improve project features, artistic output and the whole workflow;
- Working independently in a distributed agile team (Belarus/UK) with all kinds of sprint meetings (via skype calls), solving problems directly with the customer via regular written and verbal communication;
- Going on a business trip to UK to work closely with the customer team.
