• Programming languages: Java, SQL

• Skills: Spring, Hibernate, JPA, JDBC,Spring MVC,Spring Framework,Spring Boot,

Spring Security, Spring Data, Spring IoC, Spring Data, Spring Web

• DBMS: PostgreSQL

• Development environments: IntelliJ IDEA.

• Source management tools: Git.

• Servers: Tomcat

• Additional skills: HTML, CSS, Stream API, Thymeleaf, Docker, C++

Experience

*Project Blog

link: 35.247.39.211:8080/

github: github.com/C1lowen/graduation_project

This is a blog developed using Spring, Hibernate, Thymeleaf. Basic

functionality includes the ability to publish posts, leave comments, and add

images. There is also an admin panel that allows the administrator to delete

users, posts and comments.

The main components of the project:

Blog: The ability for users to publish new posts where they can share their

thoughts, ideas, photos or any other information.

Comments: The ability for users to leave comments under posts.

Image: Functionality for adding images to posts.

Admin panel: This is the admin interface where you can manage users, posts and comments.

*Link Shortener

link: 34.168.253.57:8080/root

github: github.com/C1lowen/LinkShortener

A project to create shortened links for ease of use and sharing. A simple but interesting mini-project. There is also a counter for counting the number of transitions. If a person wants to shorten 2 identical links, he is given the same link as the first time

Also, I successfully completed the courses at the Prog Academy company, in particular, the Java Developer Course. This gave me the opportunity to learn a lot of new skills in Java development. During my studies, I developed my first independent project, which I called Project Blog, which I talked about above
