Досвід роботи

Team Lead Web Development Team

ATN (Product), Одеса
06.2019 – По теперішній час (7 років 5 місяців)

Обов'язки:

RESPONSIBILITIES

• Own a platform of ~20 Go microservices (MySQL, MongoDB, Redis) serving ~1,000 active users.

• Lead a team of 5 engineers: code review standards, onboarding, technical documentation and Agile delivery cadence.

• Design REST and GraphQL APIs with a focus on concurrency, performance and scalability.

• Own architectural decisions and the platform's technical documentation.

ACHIEVEMENTS

• Cut report generation from 40s to 3s: removed N+1 queries, reduced the read to a single aggregate query and cached results in Redis.

• Introduced Docker and GitLab CI/CD, making releases repeatable and shortening the delivery cycle.

• Built the company's first AI-backed services: LLM integration, in-house MCP servers, RAG pipelines and agent orchestration, using spec-driven development.

• Shipped production agents with Claude Code and Cowork: a content pipeline (~50 articles/month), SEO meta-generation for site pages, and review processing — together freeing roughly 20% of the team's working time.

• Automated request intake end to end: form → data normalisation → LLM

classification with structured output → database → routed notifications,

removing manual triage.

Освіта

Odesa Polytechnic National University (Одеса)

Спеціальність: Information Control Systems and Technologies

повна вища, 09.1998 – 07.2003 (4 роки 9 місяців)

Додаткова освіта

• Creating GPTs with Actions — LinkedIn, Jan 2025
• AI Agentic Engineering — Neoversity IT University, Jul 2026
• Model Context Protocol — robot_dreams, Aug 2026

Знання мов

Англійська - Високий рівень (вільно)
Додатково: B1

Додаткова інформація

Знання комп'ютера, програм: Programming: Go, PHP / Laravel, SQL, JavaScript / Vue Databases: MySQL, MongoDB, Redis Architecture & APIs: microservices, REST, GraphQL, concurrency and performance tuning DevOps: Docker, GitLab CI/CD, Git AI & LLM: Claude Code, Cowork, ChatGPT, Claude, AI by Zapier, MCP servers, RAG pipelines, agent orchestration, prompt engineering, spec-driven development Automation & no-code: Zapier, Airtable, Tally, Telegram Bot API Ways of working: Agile, code review, technical documentation
Особисті якості, хобі, захоплення, навички: Personal qualities I chase the cause, not the symptom — before changing anything I look at what data actually arrives. I like processes described clearly enough to be verified: spec first, code second. I learn new tools hands-on: take it, break it, work out why it broke. Writing documentation and mentoring juniors comes naturally after years of leading a team. Skills Beyond the technical stack: team leadership, code review, technical documentation, onboarding.
Мета пошуку роботи, побажання до місця роботи: Objective Looking for a role where AI is part of the product rather than a side experiment: Go development with LLM integrations, MCP servers and agents, owning the part that has to work in production. I enjoy both writing the code and building the proce
