Опыт работы

Full Stack WordPress Developer

EvoPlay (Розробка web рішень), Львов
10.2022 – 09.2026 (3 года 11 месяцев)

Обязанности:

• Developed and maintained large content-driven WordPress projects in Multisite/Multinetwork environments with 15+ websites per server.
• Built reusable components and interactive features, including dynamic listings, comparison tables, filters, forms, pagination/load-more, and AJAX-driven features.
• Implemented new pages and redesigned existing functionality from Figma, delivering responsive, pixel-accurate interfaces while preserving existing business logic.
• Maintained, extended, and debugged complex existing themes and internal plugins, investigating issues across PHP, database, JavaScript, frontend, content layers.
• Optimized frontend and backend performance, including PHP/query optimization, caching, images and frontend assets, and PageSpeed-related improvements.
• Worked with custom SQL for complex filtering, data processing, troubleshooting, and production data changes.
• Delivered features through a Git-based feature branch → staging → QA → production workflow, including merge-conflict resolution and post-deployment verification.
