| График работы: | полный рабочий день |

## Описание вакансии

### Embedded system developers

REQUIRED QUALIFICATIONS
Needed embedded system developers for multiple positions and projects, and that is why we have a possibility to be flexible with you and allocate you to the project that matches the best with your background, skills and areas of interest.

The common requirements for most of our embedded system positions are strong skills in embedded C/C++ preferably with embedded Linux. You could have worked in low level with microcontrollers and RTOS or you might have focused on drivers, kernel and platform level development. Or maybe your expertise area is more in application side development, which is okay too!
