Опыт работы:	от двух лет
График работы:	полный рабочий день

Описание вакансии

Role
We are looking for a Frontend Developer who will not only write traditional code but also work directly with the Gitmir platform — assembling applications from modular components, configuring visual data flows, and helping shape new usage patterns.

You'll be working on real-world projects, from startups to enterprise-level products, proving in practice that a new paradigm of development is possible.

Responsibilities

- Build web applications on top of Gitmir by composing them from visual configurations and modules.
- Configure UI/UX using Gitmir's component library.
- Integrate frontend logic with APIs and dynamic data sources.
- Contribute to the development of new UI components for Gitmir's library.
- Support migration of client projects from legacy systems into Gitmir.
- Propose improvements, patterns, and best practices for the ecosystem.

Requirements

- Strong knowledge of JavaScript/TypeScript and modern frameworks (React, Vue, or Angular).
- Solid understanding of HTML/CSS, responsive and cross-browser development.
- Experience working with REST APIs and/or GraphQL.
- Interest in no-code/low-code platforms and visual development.
- Basic understanding of frontend application architecture.
- English proficiency for technical documentation and team communication.

Nice to Have

- Experience with visual builders or low-code platforms.
- UI/UX design skills.
- Open-source contributions.

What We Offer

- Be part of creating an ecosystem with no direct analogues on the market.

- Work in an international, innovation-driven team.
- Ability to influence the product and its architecture.
- Remote-first format with flexible working conditions.

Competitive salary and bonuses for contributing to Gitmir’s growth.
