Ваш надежный помощник

Backend Engineer (Node.js, AI Applications), 120000 грн.

Киев, 26 ноября

Компания: CML Team (https://jobs.ua/company/id/1579189) (Все вакансии)

Рубрики: IT, WEB специалисты

Пожелания к сотруднику

Образование:	полное высшее
Опыт работы:	обязателен
График работы:	удаленная работа

Описание вакансии

We are looking for a strong **Middle Backend Engineer** to help us build AI-powered products and workflows. This role is ideal for someone with solid **Node.js** / **TypeScript** experience who is already exploring AI in practice and wants to go deeper into **RAG, voice agents, and multi-agent systems**.

What matters most is a strong backend foundation, the ability to build reliable production systems, and a genuine interest in how LLM-based applications work and in using AI to speed up delivery.

What you'll do

- Design and build backend services for AI-powered product features
- Work with **LLM APIs, prompts, AI SDKs, and agent workflows**
- Help shape systems involving **retrieval, grounding, tool use, and orchestration**
- Collaborate on products that include **Node.js backend**
- Improve reliability, latency, observability, and overall production readiness of AI features
- Explore and implement capabilities around **RAG, voice experiences, and multi-agent systems**

What we're looking for

- Strong commercial experience with **Node.js** / **TypeScript,** 2+ years of experience
- Experience building and maintaining **complex backend systems** in production
- Solid understanding of architecture, APIs, async flows, integrations, and system reliability
- Some hands-on exposure to **LLM applications**: prompt design, AI APIs, agent flows, or internal AI tooling
- Ability to learn quickly in a fast-moving technical area
- Strong engineering judgment and product mindset
- A degree in **Computer Science, Mathematics, or a related field** is a plus, but not required

Nice to have

- Experience with **LangChain, LangGraph, Vercel AI SDK**, or similar frameworks
- Familiarity with **RAG concepts** such as chunking, embeddings, retrieval, reranking, and hallucination reduction
- Experience with **voice agents** or real-time AI experiences
- Experience with **React**
- **Familiarity with Python**

Why this role

- You'll work on real AI product problems, not toy demos
- You'll have room to grow into **RAG and agentic systems**
- We're open to hiring a strong engineer with the right mindset, even if some of the AI-specific depth is still developing
