## Опис вакансії

IT company is looking for a **DevOps Engineer**.

### Duties

Building, maintaining, troubleshooting and evolving:  
- high available multiple datacenter infrastructure (Kubernetes based);  
- development toolchain (Docker images, CI/CD pipelines, Issue trackers);  
- distributed monitoring/logging/tracing systems;  
- distributed databases, storages and events buses;

### Qualifications

- strong Linux administration experience, shell scripting;  
- familiarity with Ansible;  
- experience in programming (Python, Golang, PHP are preferable);  
- database administration experience (MySQL, PostgreSQL, Redis, Cassandra, etc);  
- understanding clustering, high availability, failover, load balancing, self-healing;  
- understanding of fundamentals: PKI, DNS, TLS, SSH;  
- Docker experience is an advantage;  
- Kubernetes/CoreOS experience is an even bigger advantage;  
- distributed monitoring/logging/tracing systems experience (Fluentd, Prometheus, ElasticSearch, Kibana, Grafana, Zipkin, etc) is a huge advantage.

### Conditions and principles

- remote work and communications (not freelance);  
- stable Internet connection for video calls is mandatory;  
- working time: 8 hours/day, 40 hours/week;  
- salary 2000 USD/month, paid weekly;  
- relocation abroad is possible.
