Побажання до співробітника

Освіта:	повна вища
Досвід роботи:	від двох років
Графік роботи:	повний робочий день

Опис вакансії

Project description:

We are offering a bright, new project, the goal of which is to create a platform where the user can create and manage cryptocurrencies (such as Bitcoin), applying comprehensive financial logic.

The client is a US-based FinTech platform that combines security innovation, the advantages of distributed ledgers, and patent pending liquidity algorithms to produce a new kind of financial instrument: a highly-liquid, dividend-yielding, investment-grade digital currency with the stability of bonds, the transferability of Bitcoin, and the exchangeability of dollars.

The main goal of the product is to provide its users with a flexible financial instrument that will enable working with actual currencies as well as bonds (IOUs). Integration with Ripple provides powerful possibilities to make money transfers between payment providers that cannot be done directly. The upcoming release will introduce functionality for starting Initial Coin Offering campaigns that will be attractive to accredited investors.

Dev-Pro participates in both backend and frontend development. The frontend part is based on Angular 4.0, backend on ASP.NET Core, so there are plenty of open opportunities and challenges to explore and resolve. You will join a team of experts, so will be able to validate your ideas and to become a part of the collective mind.

Role description:

- Work with latest technologies (Angular 4 with NgRx)
- Take decisions on additional technology stack; communicate directly with the US-based client
- Work in a tailored SCRUM-driven team of 40+ people, and also communicate with about 100 specialists in the company to share and obtain knowledge
- Work closely with developers and quality assurance engineers
- Be responsible for making, discussing, approving technical decisions, and having them implemented

Required skills:

- 3+ years of experience with JavaScript
- 1+ year of experience with Angular (2 and higher)
- Knowledge of JavaScript Design Patterns
- Experience with REST API
- Intermediate English, or higher

Desired skills:

- Experience with NgRx
- Azure services
- Understanding of Blockchain
- Knowledge of Smart Contracts and Solidity
