📍 Харків,

Рубрики: [IT, WEB фахівці](#)

Побажання до співробітника

Освіта:	середня
Досвід роботи:	не вимагається
Графік роботи:	повний робочий день

Опис вакансії

DataArt has been engaged in software development and IT consulting since 1997. Companies that create interesting products and services have complex business processes, they want to beat the competition with the help of technology, and usually they turn to us. We, in turn, help them come up with technologies, build, implement, maintain, and upgrade them.

We currently have many projects that require junior manual testing specialists. In one of them we're improving the internal system of one of the world's top three biggest rating agencies. We're also working with the systems of a major online supermarket, and developing medical applications (used as software for clinical research, and also used by patients).

It is also should be noted that we hire people not for a project but for a team. Projects change, but the DataArt network of companies with its infrastructure, support, and tools of professional development stays.

DataArt has a flat structure, which means we don't have superiors and subordinates. The engineers directly communicate with the customers' representatives and are free to choose the tools for the job (as long as not constrained by other factors). We have free internal language and technological courses, hold international conferences, participate in other party conferences, provide employees with insurance, and take care of them in all kinds of ways.

DataArt's network consists of 20 sales and development centers (US, UK, Argentina, Germany, Bulgaria, Poland, Russia, Ukraine, and Latvia). Our specialists can work in any of the centers after discussing it with the project team (and if they desire to, of course).

Required Skills and Experience

- 3+ years of manual testing experience (desktop and web applications);
- Experience managing test documentation (test plans, test cases);
- Solid understanding of basics of application testing (types, ways of organizing tests);
- Experience of Scrum-based work;
- Good spoken English.

Additional Competences

- Experience organizing and maintaining testing processes in projects;
- Experience managing a team of testers;
- Experience of automated testing;
- Knowledge of automation tools (Selenium, TestComplete, QTP, Jmeter etc.);
- Experience working with foreign clients.

DataArt offers:

- Professional Development:
  - Experienced colleagues who are ready to share knowledge;
  - The ability to switch projects, technology stacks, try yourself in different roles;
  - More than 150 workplaces for advanced training;
  - Study and practice of English: courses and communication with colleagues and clients from different countries;
  - Support of speakers who make presentations at conferences and meetings of technology communities.
- The ability to focus on your work: a lack of bureaucracy and micromanagement, and convenient corporate services;
- Friendly atmosphere, concern for the comfort of specialists;
- Flexible schedule (there are core mandatory hours), the ability to work remotely upon agreement with colleagues;

- The ability to work in any of our development centers.
