Опис вакансії

About us:

We are technology company delivering innovative solutions in space of Intelligent Automation, Robotic Process Automation, Machine Learning, Natural Language Processing. We operate across industries on European, North America and Asia markets and we have offices in Ukraine and Hong Kong.

We are happy to announce new vacancy in our Kiev Office – Senior Intelligent Automation Developer. We encourage to apply for this role the candidates who are willing to join fast growing team and eager to learn new cutting-edge technologies to build a better technology world!

About the role:

You would be working in close cooperation with CTO to deliver intelligent automation projects. We seek for candidate with hands-on experience in software development / business process automation to provide support from end-to-end perspective to group of developers and engagement managers to resolve technical challenges in automation projects. You would be working with different stack of technologies by delivering automation for world-well-known enterprises. This role is ideal for candidate who is willing to get a great exposure to international projects as well as to become a Tech Lead to manage complex intelligent automation projects:

- End-to-End Business Process Automation through delivering intelligent automation solutions for business to improve operational efficiency
- Business Process Automation via Robotic Process Automation and Advanced stack of technologies (Computer Vision, Natural Language Processing, Machine Learning)
- Developing intelligent solutions for business process automation through leveraging OCR (Optical Character Recognition), Computer Vision Technology, advanced programming

Requirements for candidates:

- 5+years of hands-on experience in software development / business process automation
- Hands-on experience and good knowledge of any programming language C# (or VB.NET) / Java / etc.
- 3+ years of hands-on experience in Advanced IT area or DevOps (coding, critical business applications deployment, maintenance and / or development) is an advantage
- Good understanding of End-to-end Agile software development and delivery following Object Oriented Design and MVC patterns
- Experience in general administration of Windows and Linux OSs
- Experience in Virtualization (private cloud / public cloud)
- Experience in Network technologies (VPNs, NAT, FW), Server and Workstations infrastructure
- Good understanding of Information security (Network security, Applications security)

Previous Business Process Automation experience would be a great advantage!

Key insights:

- This job is ideal for candidates who are eager to learn new cutting-edge technologies to build a better technology world
- Professionals with strong Agile approach are very welcome as this is our key delivery methodology
- Salary will be set on individual base depending on the candidate's background, knowledge and experience

What we offer:

- You would be working with World Well Known Enterprises / Multinational Corporations to bring innovation in
- You would be working in a team of professional developers to drive the success
- You would get a great exposure to large global projects working in a dynamic tech environment
