Middle Automation QA Engineer

📍 Київ,

Компанія: Devtorium

Рубрики: IT, WEB фахівці

Побажання до співробітника

Освіта:	не має значення
Досвід роботи:	від двох років

Опис вакансії

Project Description:

The project provides innovative enterprise software to fight corruption and fraud. The system consists of different user roles which perform separate business purposes and have access to the special functionalities in accordance with permissions. The system is used to create a request to the approval department for providing services for submitter (requester). The following services could be requested: 'Provide a Gift', 'Provide a Meal', 'Provide Support for Meeting Attendance or Travel', 'Engage a HCP or GO' and 'Provide External Funding'. BaaS architecture, more specifically Parse library, is used on the Back-end side. Client part of this library is used on Front-end side. With this library all work is carried out with entities and connecting to DB. Parse is considered as a middleware for the express server.

Requirements:

- 3+ years of experience in AQA
- Understanding of QA best practices and methodologies: test planning, test cases, bug tracking systems, and software development life cycle
- Clear understanding and experience of working by Agile/SCRUM development methodology
- Experience in requirements analysis, estimates, identification of areas for automation, development of test metrics and techniques to maximize testing efficiency and scalability
- Expertise automation test framework development using Cypress
- Experience in testing web applications, APIs (REST)
- Experience in development, maintaining, and executing automated testing tools for functional, acceptance, integration, regression, and system testing
- Basic understanding of cloud based SaaS application architectures (AWS)
- Good communication skills: good spoken and written English (Intermediate or Upper-Intermediate English level)
- Working knowledge of AWS is a plus
- Experience in building processes using build/source code tools such as GIT, Docker is a plus
