

DevOps engineer

📍 Вінниця,

Компанія: Waveaccess Vinnytsya
branch

Рубрики: [IT, WEB фахівці](#)

Побажання до співробітника

Освіта: не має значення
Досвід роботи: від п'яти років
Графік роботи: віддалена робота

Опис вакансії

Responsibilities

- Create Azure DevOps CICD pipelines primarily for Azure PAAS Services (e.g. Azure functions, logic apps, app/sql services)
- CICD pipelines must include code analysis, ARM template scans, SAST/DAST where appropriate
- CICD pipelines must be implemented in Azure DevOps yaml Pipelines (e.g. not classic visual editor for Build/Release)
- Automate environment provisioning leveraging Infrastructure as Code (IaC)
- Automation should include enabling monitoring, tracking of assets, and enable cost management (e.g. through tags)
- Debug performance or other environment related issues
- Develop Dashboards for Monitoring and Alerting Rules
- Work with development teams to document and streamline as much of their workflow as possible, including agile branching and release strategies.
- Orchestrate end-to-end coordinated deployments of both app code and data
- Create reusable, extensible, secure COE artifacts (e.g. CICD yaml templates, ARM Templates, Blueprints) to enable wide-spread adoption by developers of best practices and compliance across an organization
- Coach development teams on how to use the above COE templates, self-service automation, and branch/release strategies as it applies in an Agile SDLC
- Good communication skills and troubleshooting skills
- Someone who can handle multiple complex systems and not shy away from the challenge of improving them.

Must have

- At least 5 years of experience with DevOps automation & Infrastructure as code using both scripting languages (e.g., PowerShell, Bash, Python) and Configuration Management DSLs (e.g., Terraform, Ansible, etc.)
- Experience working in agile/scrum environment
- Self-driven and should be able to create work in less guided environment
- Excellent oral and written communication skills, ability to converse and collaborate with globally distributed software teams
- Active listening and excellent presentation and writing capabilities
- Critical thinking, decision-making, time/stress management and organizational skills
- Influence a culture of service ownership at organization. Engage in training and mentoring to help develop other engineers with this

mindset

- 2+ years of experience of Azure DevOps tools & Azure ecosystem
- Experience with IAC tools (Terraform, CloudFormation)
- Experience with configuration management tools like Ansible.
- Proficient in Git framework and branching strategies.
- Strong communication, analysis and problem-solving skills
- Adaptable to changing architecture and new technologies
- Bachelor's Degree in Computer Science/Computer Engineering / Relevant technologies

Added advantage

- Agile Certified Engineer
- Azure Certified DevOps Engineer and/or other Azure certifications
