Графік роботи:	повний робочий день

Опис вакансії

QA Engineer — Gitmir Ecosystem

Role
We are looking for a QA Engineer who will ensure the quality, stability, and reliability of applications built on Gitmir. You'll be responsible for testing both the Gitmir platform itself and projects created with it — ensuring that new features, modules, and integrations work flawlessly.

This role is ideal for someone detail-oriented, passionate about product quality, and eager to test not just code, but also new paradigms of development.

Responsibilities

- Design and execute test cases for Gitmir's core platform and client projects.
- Perform manual and automated testing of frontend and backend functionality.
- Validate integrations with APIs, databases, and visual business logic flows.
- Identify, document, and track bugs, working closely with developers to resolve them.
- Ensure regression testing before releases and deployments.
- Contribute to building automated test suites and continuous testing practices.
- Help define quality standards and best practices for the Gitmir ecosystem.

Requirements

- Proven experience as a QA Engineer, Software Tester, or similar role.
- Strong knowledge of QA methodologies, tools, and processes.
- Hands-on experience with manual testing of web applications.
- Understanding of REST APIs and ability to test backend integrations
- Basic knowledge of SQL/NoSQL databases.
- Attention to detail and a structured approach to problem-solving.
- English proficiency for documentation and communication.

Nice to Have

- Experience testing low-code/no-code platforms or SaaS products.
- Performance and load testing experience (JMeter, k6, etc.).
- CI/CD testing pipeline knowledge.

What We Offer

- Work on a cutting-edge ecosystem with no direct analogues on the market.
- Opportunity to influence quality standards from the ground up.
- International, innovation-driven team.
- Remote-first format with flexible working conditions.
- Competitive salary and performance-based bonuses.
